Professional Summary

DevOps / Platform Engineer with 4 years building Kubernetes-based internal developer platforms at scale — from a 2000-engineer IDP at Russia's largest bank to a 30K-store retail network. Focused on GitOps, IaC, and full-stack observability; contributed to open-source Yandex Cloud Terraform providers. Currently expanding into MLOps infrastructure. Fluent in English, Spanish B2 (DELE), targeting international cloud-native roles.

Work Experience

DevOps Engineer

Magnit Tech — electronic document management system for 30K+ store retail network Aug 2025 – Present

- Replaced manual RDP/PowerShell deployments with GitLab CI pipelines for Java and .NET microservices in 2 months with no prior handover — introducing GitFlow, multi-environment rollouts, and Nexus artifact management.
- Migrated 50+ CentOS 7 VMs to Rocky Linux 8 without data loss under an information security audit, extending OS support lifecycle to 2029.
- Replaced click-ops Yandex Cloud infrastructure with Terragrunt modules (per-environment state isolation), building custom wrappers with automated Vault secret provisioning; contributed to open-source Yandex Cloud Terraform modules.
- Containerized Tessa (.NET) platform from VMs to Kubernetes — introducing review environments, reducing deployment time, and cutting VM infrastructure costs.

DevOps Engineer

Sber Tech — Internal Developer Platform for 2000+ engineers, largest bank of Russia Aug 2024 – Aug 2025

- Built and maintained observability platform from zero for Kubernetes clusters (VictoriaMetrics, Loki, Tempo, Grafana) serving an Internal Developer Platform for 2000+ engineers
- Managed lifecycle of 5+ self-hosted Kubernetes clusters — upgrades, CNI and Ingress-Controller installations, capacity planning, and troubleshooting.
- Hardened Kubernetes security (SecurityContext, PodSecurityAdmission, NetworkPolicies, Keycloak OIDC), passing company-wide information security audit.
- Consolidated scattered Helm deployments into a unified GitOps mono-repo (ArgoCD), enabling consistent multi-environment rollouts for a team of 15 engineers.

System Engineer

SpaceWeb — bare-metal and cloud hosting provider Nov 2023 – Aug 2024

- Automated bare-metal OS provisioning via PXE/Cobbler with kickstart scripts, eliminating manual server setup
- Refactored Ansible playbooks for RHEL 7→9 migration; managed KVM virtualization at hosting scale
- Built S3-compatible storage with MinIO and a Python FastAPI service for bucket/user lifecycle management

Operations & Support Engineer

SpaceWeb — bare-metal and cloud hosting provider Jul 2021 – Nov 2023

- Managed infrastructure incidents, DNS zones, and DDoS mitigation; diagnosed and installed bare-metal servers (ipKVM/IPMI), cabled and commissioned datacenter racks; automated routine tasks with Bash scripts.
- Recognised 7× as best support engineer across the team.

Skills

Kubernetes · Docker · Helm · ArgoCD · FluxCD · Kustomize · GitLab CI · GitHub Actions · Terraform · Terragrunt · Ansible · GitOps · Yandex Cloud · VictoriaMetrics · Prometheus · Loki · Tempo · Grafana · OpenTelemetry · Bash · Python · Golang · .NET · Nginx · PostgreSQL · S3 · Vault · AWS

Education

ITMO University

Saint Petersburg, RU

Master of Science in Computer Systems Networking & Telecommunications, 2025

Thesis: Development of the DBaaS platform architecture in a Kubernetes cluster

GPA: 5.0 / 5.0

ITMO University

Saint Petersburg, RU

Bachelor of Science in Computer & Information Systems Security, 2023

Thesis: Development of an automated phishing site search system on virtual hosting servers

GPA: 4.86 / 5.0
